NEWSLETTER · IN CONVERSATION WITH CHARBEL ABDO

Ready for the first door

Charbel Abdo — pharmacist, born in Lebanon, now UK-based — on evidence-based practice, multicultural insight, and stepping into clinical research at the start of a career worth watching.

Not every guest is a founder with a decade of headlines behind them, and that's the point. Charbel Abdo is a fully qualified pharmacist who built his clinical foundation in Lebanon and recently earned an MSc in pharmaceutical sciences with distinction from the University of Greenwich. Now UK-based, he's actively seeking his first opportunity in clinical research — and this conversation is a deliberate spotlight on the talent about to enter the field.

I'm ready to bring patient-first thinking into clinical research.

— Charbel Abdo, on Pharma Prescribed

Frontline plus academic depth

Charbel pairs hands-on pharmacy experience with fresh, distinction-level academic grounding, and an eye for evidence-based practice and regulatory innovation. It's exactly the combination the field says it wants in new entrants — and doesn't always make it easy for them to offer.

The multicultural lens

Having trained across Lebanon and the UK, he brings a genuinely cross-cultural perspective — the kind that matters in an industry running global trials for diverse populations. A different background is, increasingly, a professional asset rather than a footnote.

An honest ask

There's something refreshing about a guest whose mission is simply to get started and contribute to patient safety and trial excellence. If you're building a team and value analytical precision and patient-first thinking, this is a name worth remembering.
